

Mr. Jakub Trsek

Unicorn a.s. - Danube House
Karolinská 650/1
186 00 Praha 8 Czech republic

Rome, 01 april 2008

Based upon the results of a tender held in 2006, Unicorn Systems a.s. (Unicorn) was selected as the supplier of an IT solution for the management of international capacity allocation and scheduling procedures on the border of Italy managed by TERN A SpA (Italian transmission system operator).

Unicorn Systems has successfully implemented the necessary modules of their electricity market management solution – Damas. The main functions provided by Damas are:

- Market Participant Management
- Long-term Capacity Auctions
- Daily Capacity Auctions
- Management of Capacity Rights and Capacity Transfers
- Nominations and Matching
- Capacity Curtailment

Damas operation started in December 2007 and its live installation can be seen at <https://damas.terna.it>. Damas is fully integrated with internal TERN A systems and ensures the cross-border data exchanges with neighbouring TSOs. The market processes and data-flows implemented in Damas are based on ETSO guidelines and standards (namely ESS v2r3, ESS v3r0, ECAN).

In the course of the project, Unicorn delivered the following supplies and services:

- Business consultations
- Damas licenses
- System design & specification
- Customization and development
- System integration and interfaces
- Data migration
- System testing and installation
- User documentation and technical documentation
- Training of users and market participants
- Application support and maintenance

Unicorn project approach, the deliverables and services have always been provided up to our perfect satisfaction.
